

CONCEPT NOTE

AI Medicine Reminder Agent

Aligned SDGs: SDG 3 (Good Health and Well-being)

Category: Agentic AI System

Prepared by: **Ravaji Parshuram Adarkar**

1. Problem Statement

Many people forget to take medicines on time due to busy schedules, aging, or managing multiple prescriptions. Missing doses can reduce treatment effectiveness and increase health risks. Existing reminder methods such as alarms or calendars are not personalized and require manual management.

2. Proposed Solution

The AI Medicine Reminder Agent is an AI-powered assistant that understands natural-language medicine requests, extracts medicine details, stores reminder schedules, and automatically sends timely notifications. It checks active reminders every minute, prevents duplicate alerts, and marks schedules as completed after the treatment period ends.

3. Key Features

- Natural language medicine schedule creation
- Automatic extraction of medicine details
- Database storage of reminders
- Automated email/notification reminders
- Duplicate reminder prevention
- Automatic completion after end date

4. Technology Stack

- Frontend: Web Chat Interface / React.js
- Backend: Python / FastAPI
- Database: PostgreSQL/MySQL
- AI: OpenAI GPT or Google Gemini
- Automation: n8n
- Notification: Email API

5. Expected Impact

Improves medication adherence, reduces missed doses, supports elderly patients and caregivers, and promotes healthier lifestyles through intelligent automated reminders.

6. Target Users

- Elderly people
- Chronic disease patients
- Busy professionals
- Parents and caregivers
- Hospitals, clinics, pharmacies

7. Conclusion

The AI Medicine Reminder Agent demonstrates how agentic AI can simplify medication management through intelligent automation. By understanding user requests, scheduling reminders, and delivering timely notifications, it helps improve treatment adherence and overall healthcare outcomes.
